

computerised accounting systems

Our 3-step approach to each implementation has been developed over years of experience.

1. Pre-Implementation Consultation

We take the time to understand your company's workflow before starting anything else. This positions the project to proceed smoothly and uncovers any unique requirements at a cost-effective stage.

Working with your data, we customise the Chart of Accounts and job/project codes according to your company's needs.

2. Implementation

During the implementation stage, we create the Chart of Accounts and job/project codes in your system and we also prepare forms with your company logo, including pro forma invoices, quotations, delivery orders, invoices, credit notes and others.

3. Training

Finally, we do not leave until your team is familiar and comfortable with your new system. Training is performed by members of our team that are application experts in addition to being engaging teachers.
